# External Content Privacy and Security Analysis

## SUBRESOURCE INTEGRITY

Subresource Integrity (SRI) is a security feature that allows browsers to verify that fetched resources (scripts and stylesheets) are delivered without unexpected alterations. The integrity of third-party resources is ensured by validating their cryptographic hashes.

SRI is correctly implemented for 1 out of 7 third-party JavaScripts and CSS les. Ensure that SRI is applied to all external JavaScripts and CSS les for complete security.

Information

## EXTERNAL CONTENT

External web content (e.g. images, video, CSS or JavaScript) can improve website loading time. However, the external content can also put privacy of website visitors at risk given that some information about them is transmitted to the third parties operating the external resources, sometimes even without proper HTTPS encryption or user consent.
